**C. V. Raman**  
**(Chandrashekhara Venkata Raman)**

Date of Birth: 07-Nov-1888

Died: 21 November 1970

Sir Chandrashekhara Venkata Raman was an Indian physicist born in the former Madras Province in India (presently the state of Tamil Nadu), who carried out ground-breaking work in the field of light scattering, which earned him the 1930 Nobel Prize for Physics and was the first person in Asia to obtain said award for achievements in science. He discovered that when light traverses a transparent material, some of the deflected light changes wavelength and amplitude. This phenomenon, subsequently known as Raman scattering, results from the Raman effect. In the year 1954, the Indian government honoured him with India's highest civilian award, the Bharat Ratna.
